

IBM Multi-layer New Technology

Pet All has introduced New Technology - Multi-layer IBM!

This consists of:

- 1 inner layer PET (colored)
- Outer layer PETG (clear)

Under this system, two layers of injection are used on a 4 sided IBM machine. These show a brilliant, clear bottle like glass, but 2 layers.

Pet All Supplies IBM Molds, Injection Blow Molding Machinery and Leak Testing Machinery for this complete system.

Samples are shown below, including 1 layer PETG clear bottles.

For information on these containers and revolutionary technology, contact:
