

Denmark Market Opens Up

Attached are photos of Can Mold's latest IBM Hybrid being delivered to a customer in Denmark. This is one of a number shipped to the client. The machine is particularly appealing to Scandinavia because of the low electricity usage compared with standard hydraulic machines.

The machine is also quieter and faster than normal hydraulic machines and has any hydraulic components fitted underneath the head, and mold, giving a clean room possibility.

88 Ton Inverted Head IBM Blow Molding Machine
